DESN 2301: INTRODUCTION TO USER EXPERIENCE DESIGN

Instructor: Jimmy Wong

Aug 06, 2024

INTRODUCTION

This project includes the design of the user interface for a skill swap application where individuals can communicate with each other via chat, video, and audio calls. The aim of "MyList" is to create visually appealing, user-friendly, and efficient engagement among users. The design shows the fundamental principles of contrast, alignment, repetition, and proximity to ensure an intuitive user experience. The interface displays features such as recent chat, status, call, message previews, search bar, and the one-to-one chat screen conversation. Users can effortlessly navigate within their conservations, send and receive messages, and share media files with the call option. Also, it shows if the user is online or offline and the on-call feature with the help of the green dot, gray cross icon, and red dot.
